1.

DETAILED ACTION

Withdrawal of rejections

Page 2

Upon a further review of the specification of the present application the examiner found, under the summary of the invention, that "A mode of coupling can be a mode for converting light fluxes from light emitting sections coupled to each other to parallel light fluxes, or a mode in

which each of light fluxes becomes one having weak converging performance or weak diverging

performance (examiner's emphasis)." (column 2, lines 32-37) and that "A lateral magnification ...

satisfies the following expression:

 $2 < \beta \le 8.5$ " (column 3, lines 11-15).

From the above teaching, it is clear that without a coupling lens, each of the light fluxes

emitted from light emitting sections would enter the first image-formation without being weak

converged or weak diverged, and that the disclosed multi-beam optical scanner still would satisfy

the above expression. Therefore, one skilled in the relevant art who had read the specification of

the '758 patent would identify the subject mater disclosed therein as supporting broader claims,

such as claims 1 and 13-15.

For the above reason and in view of applicants' arguments presented in the appeal brief,

all rejections under 35 U.S.C. 112, first paragraph, made in the final rejection are withdrawn.

Specification

The objection to the disclosure made in paper no. 15, page 2, paragraph 2, is repeated. 2.

Allowable Subject Matter

- 3. Claims 1-7 and 10-15 are allowed.
- The following is an examiner's statement of reasons for allowance: none of the cited 4. references, alone or in combination teaches or fairly suggests the claimed invention having the combined structure, in particular, the range of the lateral magnification, specified in each of claims 1 and 13-15. The cited references disclose substantially all the claimed features except for the claimed lateral magnification range. There is no motivation to modified the cited references so as to meet the claimed invention. Claims 2-7 and 10-12 are dependent claims and thus are allowable for at least the same reason.

Conclusion

5. This application is in condition for allowance except for the following formal matters: The objection to the specification above.

Prosecution on the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire TWO MONTHS from the mailing date of this letter.
